Contiguity Criterion

Are all the districts contiguous? **Yes**

Preservation of Geographic Integrity Criteria (i.e., minimize division of cities, communities of interest, etc.)

COI Category	Total # of COIs	# of COIs Preserved in Minimum Districts	% of COIs Preserved in Minimum Districts	COIs Not Preserved in Minimum # of Districts
District COIs	7	5	71%	Community of Agriculture, Linden
Cities	7	6	86%	Stockton
Water Districts	47	42	89%	California Water Service (Private), City of Lathrop, City of Stockton, No District, Rough and Ready Storage
Elementary School Districts	16	8	50%	Escalon Unified, Lincoln Unified, Linden Unified, Lodi Unified, Manteca Unified, Ripon Unified, Stockton Unified, Tracy Unified

Compactness Measures per District

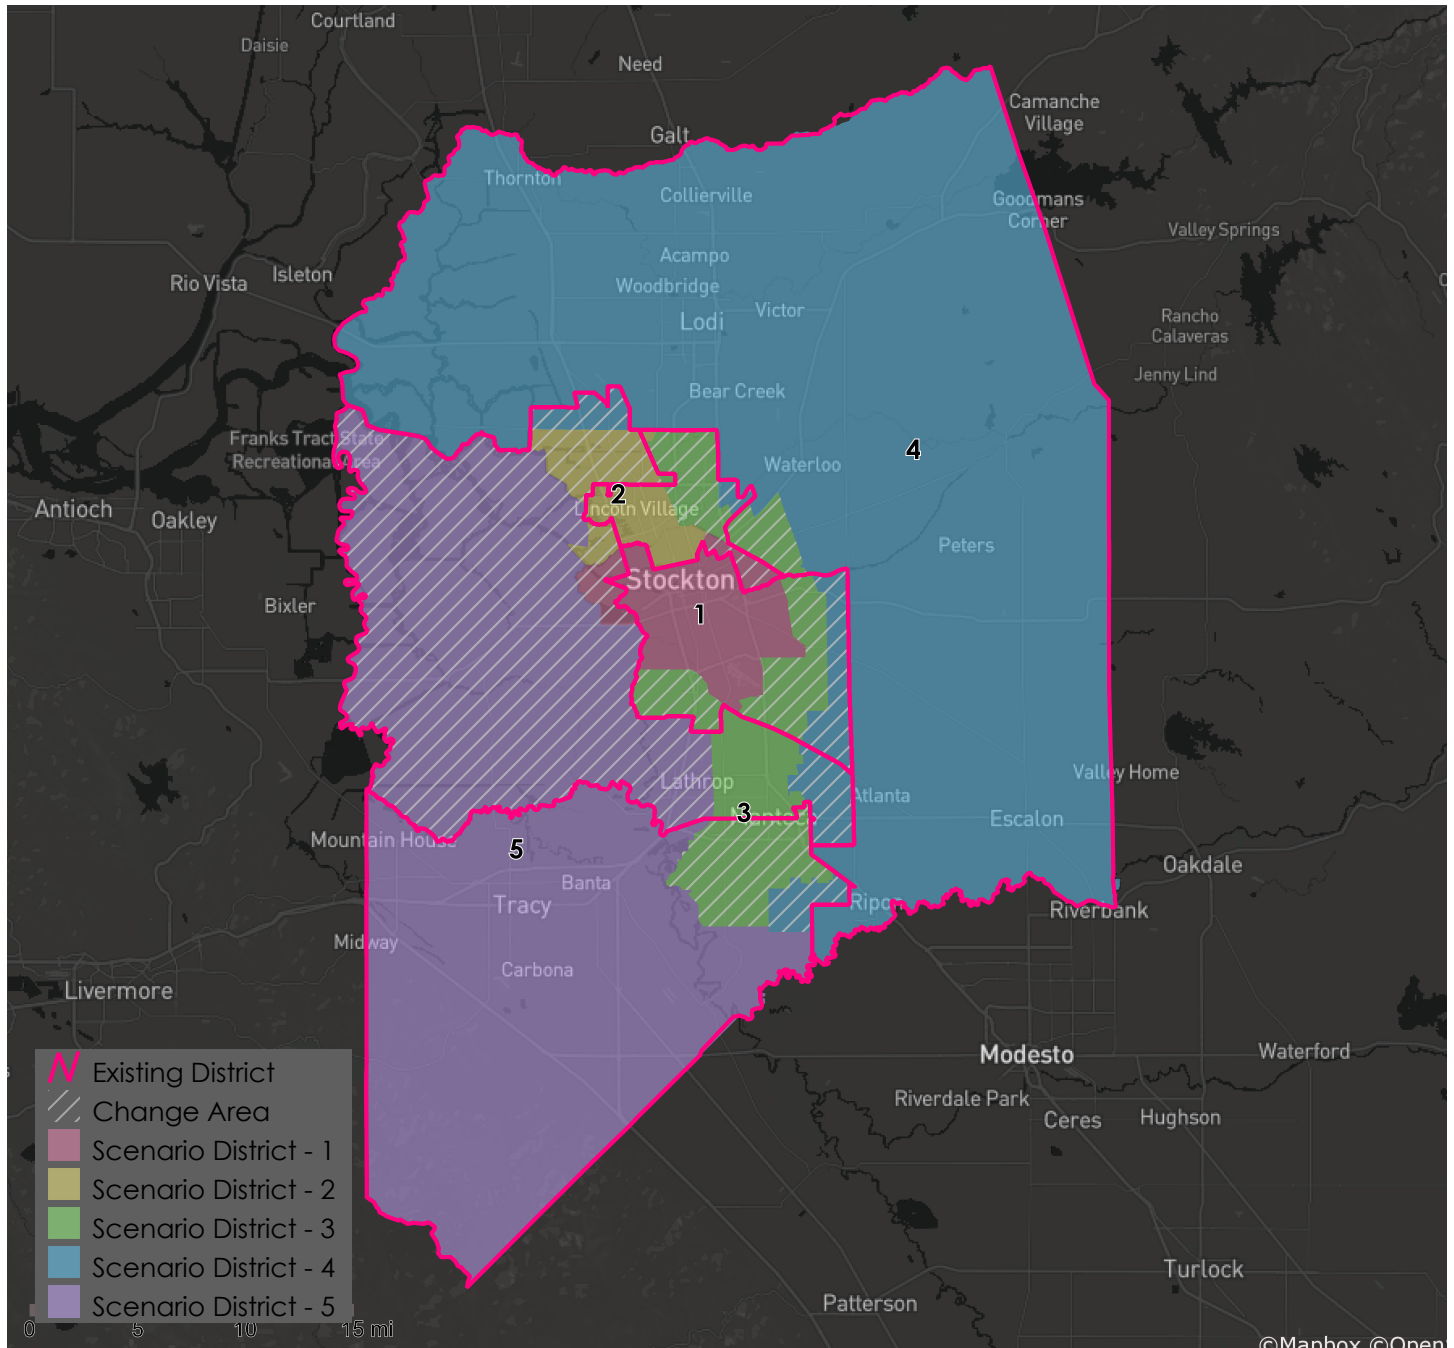

District	Polsby-Popper	Schwartzberg	Reock	Convex Hull	Length-Width
1	0.44	1.50	0.47	0.81	0.79
2	0.38	1.61	0.39	0.73	0.79
3	0.14	2.69	0.20	0.50	0.41
4	0.30	1.82	0.44	0.71	0.87
5	0.31	1.80	0.38	0.85	0.55

A single definitive measure of compactness does not exist, and no specific scores for any measures indicate satisfactory or unsatisfactory compactness. Measures are typically based on comparing geometric features of the district (e.g. perimeters, areas) to the features of a related base geometric object (e.g. minimum bounding circle, convex hull). In practice, compactness tends to be assessed by a visual test—a district in which people generally live near each other is usually more compact than one in which they do not. In California, districts are compact when they do not bypass nearby population for people farther away. Note that Polsby-Popper, Reock, Convex Hull, and Length-Width scores fall within the range of 0-1, with 0 being the least compact and 1 being the most compact. In comparison, a Schwartzberg score of 1 is the most compact and higher scores are increasingly less compact.
